Innovations in glass

EcoGlas™

The innovative new ecological and environmentally friendly insulating glass unit for energy efficient homes, exclusively to customers of K-Seal Glass Ltd.

Our support for environmental protection and change can be best demonstrated by the reduction of heat, light and power that we use in our homes. Simply using K-Seal EcoGlas™ as double glazing reduces the amount of energy lost through windows by approximately 90%.

EcoGlas™ reduces the amount of heat lost through windows and it also allows more heat (energy) from the sun in through your windows. This effect is known as solar gain and, as the sun's heat is free of charge, your home will benefit from its effects all year round. EcoGlas™ incorporates two special types of glass, Low Emissivity glass which stops heat escaping and a special "extra clear" glass which allows more solar heat in through the windows thus enabling your home to benefit from the heat of the sun. The air in the cavity of the insulating glass unit is replaced with Argon Gas for improved thermal insulation.

EcoGlas™

- Improves the energy efficiency of your home.
- Reduces the amount of energy you use.
- Is more effective than single or standard double glazing.

As from June 2007, any home that is for sale will be given an environmental efficiency rating and will be sold with an Environmental Protection Certificate. The installation of K-Seal EcoGlas™ insulating glass units will contribute to this and be a positive factor in selling your home. EcoGlas™ will also help most windows gain a minimum C rating on the Window Energy Rating scheme helping to reduce fuel bills and your carbon footprint.

Windows containing K-Seal EcoGlas™ are all rated C or above.
